

Bowls Scoreboards

Standard Displays

Developed from our original range of indoor bowls scoreboards with seven segment digits we now use a standard 160mm dot matrix LED display which is suitable for both indoor and outdoor scoreboards.

Rink End Scorers

Wall mounted, and requiring just a mains socket to connect the power supply unit to, these are positioned at the end of each rink. The scores are changed using the radio remote control which may be wall or post mounted if required. This control may also be used to vary the brightness of the display. Separate displays can be provided to show the scores from the away leg(s) of competition matches.

Totalisers

Totalisers display the cumulative scores from selected individual rinks. There may be multiple totalisers within an installation which can show independent scores from multiple matches in progress at the same time e.g. Denny/Yetton cups. Rinks to be totalled are selected using a simple switch box and as the whole system is wirelessly connected only a mains supply is required.

Bowls Scoreboards

Combined and Custom Scoreboards

Some clubs use a central scoreboard which shows the scores on all the rinks and which can include a totaliser.

Using alphanumeric displays or screens we are able to render central boards to also display skip/club names or messages.

Custom information can also be extracted and displayed. Scores and data may be exported to a computer and to a club or league website.

Outdoor

Generally one master scoreboard with radio remote controls is the optimum solution for outdoor bowls clubs. The scores are visible even in strong sunlight due to the high brightness displays and the polycarbonate front panel with an anti-glare finish. This is the same material they make riot shields from so together with the powder coated aluminium enclosure this is a very durable solution.

Side panels are available with rails and sets of slide in letters to display skip or club names or for a completely electronic solution further LED panels can be used.

Something Special

When Potter Leisure Resort, home of the World Indoor Bowls Championships, came to us we pulled out all the stops to produce a 21st century solution for this prestigious venue. Based on a dedicated computer network with the rinks scores shown on 40" LED screens the summary scores for 12 rinks across two venues could be displayed, along with live TV and video, on a giant plasma screen in the bar.

Now further developed to utilise HDMI technology, the new system installed at Boston IBC includes a 3m x 2m P5 central screen which not only acts as the totaliser but can display messages to keep the members informed plus graphics and advertising to generate revenue from club sponsors. The setup and control of the master board is all handled by a custom computer program which additionally has a rink timing feature for signalling the end of matches or club sessions.
